- A. 10%
- B. 15%
- C. 20%
- D. 25%

Q9. Find the odd one out.

- A. SQL
- B. Python
- C. Excel
- D. Chrome

Q10. Which is most important before analysis?

- A. Coloring charts
- B. Cleaning data
- C. Printing reports
- D. Deleting rows randomly

Section 3 — Data Analysis (SQL + Python Focus)

Q11. Which SQL command is used to retrieve data?

- A. GET
- B. FETCH
- C. SELECT
- D. EXTRACT

Q12. Which pandas function reads a CSV file?

- A. `pandas.load_csv()`
- B. `pandas.read_csv()`

C. `pandas.open_csv()`

D. `pandas.csv_read()`

Q13. Which SQL clause groups rows with similar values?

A. ORDER BY

B. GROUP BY

C. WHERE

D. JOIN

Q14. What does `df.shape` return in pandas?

A. Column names

B. Data types

C. Number of rows and columns

D. Missing values

Q15. Which chart is best for trends over time?

A. Pie chart

B. Line chart

C. Scatter chart

D. Histogram

Section 4 — Scenario-Based Dataset Analysis

Dataset Scenario:

You are working as a junior data analyst for an ecommerce company.

The company has provided a sales dataset with the following columns: order_id customer_id order_date product category quantity price revenue city payment_method Your task is to analyze business performance and answer the following questions.

Q16. Which SQL query would help identify the top-selling products by revenue?

- A. Using GROUP BY product and SUM(revenue)
- B. Using DELETE statement
- C. Using INSERT query
- D. Using DROP TABLE

Q17. The dataset has duplicate customer rows. What should be done first?

- A. Ignore duplicates
- B. Remove duplicates during cleaning
- C. Delete the entire dataset
- D. Create charts immediately

Q18. Which Python library would be most suitable for dataset analysis?

- A. Flask
- B. Pandas
- C. Selenium
- D. OpenCV

Q19. If monthly revenue suddenly drops by 40%, what should an analyst do first?

- A. Delete low-performing rows
- B. Investigate sales trends and anomalies
