

Data Analyst Assessment Test

Duration: 90 Minutes

Total Questions: MCQ + Practical Problem Solving

Sections: Verbal Reasoning Logical Reasoning Data Analysis (SQL + Python Focus) Scenario-Based Dataset Analysis Practical Solve-Based Questions

Section 1 — Verbal Reasoning

Q1. Choose the word closest in meaning to 'analyze'.

- A. Ignore
- B. Examine
- C. Delay
- D. Remove

Q2. Choose the correct sentence.

- A. The data are inaccurate.
- B. The data is inaccurate.
- C. Data inaccurate is.
- D. Data are inaccurate badly.

Q3. Which sentence is most professional?

- A. Dashboard cool looks.
- B. Revenue gone up a lot.
- C. The analysis indicates a 15% revenue increase.
- D. Data is amazing.

Section 2 — Logical Reasoning

Q4. What comes next? 5, 10, 20, 40, ?

- A. 50
- B. 60
- C. 70
- D. 80

Q5. A dataset contains 25% null values in 2000 rows. How many nulls exist?

- A. 250
- B. 500
- C. 750
- D. 1000

Q6. Revenue increases from 2000 to 2600. What is percentage increase?

- A. 20%
- B. 25%
- C. 30%
- D. 35%

Section 3 — Data Analysis (SQL + Python)

Q7. Which SQL command retrieves data?

- A. GET
- B. SELECT
- C. FETCH
- D. OPEN

Q8. Which pandas function reads CSV files?

- A. load_csv()
- B. read_csv()
- C. csv_open()
- D. open_csv()

Q9. Which SQL clause groups rows?

- A. ORDER BY
- B. GROUP BY
- C. JOIN
- D. WHERE

Section 4 — Scenario-Based Dataset Analysis

You are a data analyst at an ecommerce company. Dataset columns: - order_id - customer_id - order_date - product - category - quantity - price - revenue - city - payment_method Use analytical thinking to answer the following questions.

Q10. Which SQL function calculates total revenue?

- A. COUNT()
- B. AVG()
- C. SUM()
- D. MAX()

Q11. Which chart is best for monthly revenue trends?

- A. Pie chart
- B. Line chart
- C. Histogram
- D. Scatter chart

Q12. What should be done first if duplicate rows are detected?

- A. Ignore them
- B. Remove duplicates
- C. Delete dataset
- D. Build dashboard

Section 5 — Practical Solve-Based Questions

Solve the following analytical problems. Show SQL queries, Python code, calculations, or reasoning wherever necessary.

Q13. The company recorded the following monthly revenues: January = 50,000

February = 65,000

March = 80,000

Calculate: Month-over-month growth from January to February Overall growth from January to March

Q14. Write an SQL query to find the top 5 products by total revenue from a table named **sales**.

Q15. Write Python pandas code to: Load a CSV file named sales.csv Remove missing values Display the first 10 rows

Q16. A dataset contains 10,000 rows and 1,500 duplicate rows. Calculate: Total unique rows after removing duplicates Percentage of duplicate rows

Q17. You notice that revenue from one city dropped by 45% in one month. Explain: What analyses you would perform Which KPIs you would investigate What business recommendations you would give

Q18. Write an SQL query to calculate average order value by category. Assume the table name is **orders**.

Q19. Write Python code using pandas and matplotlib to create a line chart of monthly revenue.

Q20. An ecommerce company has the following payment usage: UPI = 45%

Card = 35%

Cash = 20%

Provide 3 business insights from this payment behavior.

Assessment Weightage

Section	Marks
Verbal Reasoning	10
Logical Reasoning	10
Data Analysis MCQs	20

Scenario-Based Analysis	20
Practical Solve-Based Questions	40
